### Detailed Action

The disclosure is objected to because of the following informalities: in the specification page 1, line 2, update the status of 10/096,599, to include the patent number.

Appropriate correction is required.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 10-28 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-26 of U.S. Patent No. 6,660,438. Although the conflicting claims are not identical, they are not patentably distinct from each other because Tanaka et al. teach a method of manufacturing a semiconductor integrated circuit device, comprising: forming a fine hole pattern in each of a plurality of regions of a dielectric film provided on a semiconductor substrate having a corresponding plurality of semiconductor regions; and a resist shade film provided outside the second pattern formation area on the surface of the second optically transmissive plate and having portions arranged to embrace at least part of the second pattern formation area.

Art Unit: 1756

The teachings of Tanaka et al. differ from those of the claimed invention in that the claimed invention teaches the use of a target pattern for mask aligning. However, it would be considered well known in the art to add a target area to facilitate alignment.
